

MagnaPrint® Screen Preparation

Prepare mesh for stencil making

General Characteristics:

MagnaPrint® Screen Preparation is a concentrated liquid wetting agent and degreaser. After initial fabric roughening, use with each reuse of synthetic mesh.

Use to prepare new multifilament and stainless steel mesh. Highly recommended for use with photopolymer direct emulsions.

Application

Mix one MagnaPrint® Screen Preparation with 10 parts water. For new multifilament synthetic or stainless steel mesh or for previously abraded synthetic monofilament mesh, apply MagnaPrint® Screen Preparation liberally to both sides of wet or dry screen with a brush or sponge.

Rinse the screen with a strong water spray to remove all traces of MagnaPrint® Screen Preparation. Dry the clean freshly prepared screens and use immediately or store in a dust-free environment.

SPECIFICATION

STORAGE

In cool place properly closed:
>5°C (40°F) <25°C (77°F)
